DESIGN SOFTWARE AND IMAGES FOR DESIGN

In order to do computer imaging design work you need images that have no backgrounds and software that will read these types of images. There are many choices of software in the marketplace and care should be taken to ensure that the software you choose is capable of reading alpha-channel images (no background images). Other considerations include the ease of use and the skills required to learn and use the software and the level of support available should problems arise. We sell **Micrografx Picture Publisher** and have tutorials for you to learn how to use this software. This powerful software is one of the very best for doing design work for both interior and exterior applications.

We currently have over 370 "cutout" images of temperate and tropical plants used for indoor use. The indoor plant cutouts were derived from "spec shots" and are of the highest quality. Great care has been taken to produce clear, clean images that will help you produce high quality designs and sales proposals.

In addition we have the "Visual Impact Earthscapes" Exterior Design Software and Images.
